| <ul style="list-style-type: none"> <li>Architected an end-to-end autonomous agent to accelerate debugging by automating the root cause analysis of internal server failures. The agent intelligently triages issues by processing complex performance and reliability logs from large-scale benchmarking systems, significantly reducing manual effort for engineering teams.</li> <li>Engineered a novel LLM-driven engine that transforms unstructured log text into structured, analyzable data. This core component interprets natural language descriptions from engineers to generate regex-based rules on the fly, enabling the agent to precisely detect known failure signatures and identify previously unseen performance bottlenecks.</li> <li>Designed and implemented a scalable Human-in-the-Loop (HITL) feedback system to ensure the agent's continuous evolution. This workflow allows domain experts to validate, refine, and approve the agent's findings on new failures, automatically incorporating them as few-shot learning examples to progressively enhance the model's diagnostic accuracy over time.</li> </ul> |                      |                            |

Deployed the application on Tomcat to test the Active Directory by using SecureAuth.</li> <li>Optimized the application with MIT-Licensed NPM plugin for SAML 2.0, samlify, to establish connectivity with Active Directory over Node.js.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                      |                            |
| <b>Research Experience</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                      |                            |
| <b>AI-Assisted Competency Assessment from Egocentric Video in Simulation-Based Nursing Education</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                      |                            |
| Jul 2024 – Mar 2026                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                      |                            |

*Collaborators: Yilin Liu, Madison Mason, Surya Rayala, Gautam Biswas, Daniel Levin, Meiyi Ma*

- Proposed a three-stage framework for automated competency assessment from egocentric nursing simulation video using frozen visual encoders and few-shot learning
- Achieved 57.4% MOF in leave-one-out 1-shot recognition using frozen DINOv2 backbone with HMM Viterbi decoding across 22 densely annotated sessions (3.8 hours, 493 actions)
- Discovered a negative correlation between recognition accuracy and instructor-rated competency: more competent students produce diverse, harder-to-classify workflows
- Identified patient safety protocols and team communication as key behaviors reflected in the competency-complexity pattern through per-item analysis and process model comparisons

**BEAGLE: Behavior-Enforced Agent for Grounded Learner Emulation**

Aug 2025 – Jan 2026

*Collaborators: Clayton Cohn, Zifan Xu, Siyuan Guo, Gautam Biswas, Meiyi Ma*

- Developed BEAGLE, a neuro-symbolic framework addressing LLM competency bias in student simulation for open-ended problem-solving environments
- Integrated Self-Regulated Learning (SRL) theory with a semi-Markov model governing timing and transitions of cognitive and metacognitive behaviors
- Implemented Bayesian Knowledge Tracing with explicit flaw injection to enforce realistic knowledge gaps and 'unknown unknowns'
- Designed a decoupled agent architecture separating high-level strategy from code generation to prevent silent self-correction of intentional errors
- Achieved human-indistinguishable synthetic traces in Turing test evaluations (52.8% accuracy), significantly outperforming state-of-the-art baselines

**Every Rep Counts: An Adaptive Framework for Personalized and Fine-Grained Exercise and Rest Segmentation in Physical Therapy**

Jun 2024 – Jan 2026

*Collaborators: Meiyi Ma*

- Extended the EXACT framework with channel-aware gating and adaptive batch normalization to handle hardware heterogeneity and user diversity
- Integrated U-Net architecture with Model-Agnostic Meta-Learning (MAML) for rapid adaptation to new tasks with minimal retraining
- Developed a real-time streaming inference pipeline enabling immediate feedback during physical therapy sessions
- Achieved up to 20% improvement in segmentation Dice score over state-of-the-art models with strong out-of-distribution generalization

**Explainable AI for First-Person Video Segmentation in Nursing Simulations**

Jul 2024 – Mar 2025

*Collaborators: Daniel Levin, Gautam Biswas, Alyssa White*

- Developing explainable AI methods to analyze video segments from Tobii Glasses' first-person perspective during nursing simulation training sessions
- Designed an unsupervised segmentation method optimized for processing long videos efficiently
- Focused on interpretable models to link gaze dynamics with task performance and learning outcomes

**IMU-Guided Segmentation and Sampling for Video Classification**

Feb 2024 – Dec 2024

*Collaborators: Meiyi Ma*

- Creating an IMU-guided method to enhance classification accuracy and efficiency in multimodal data
- Improved Temporal Segment Networks by incorporating motion-based insights for better frame selection

**Learning with Preserving for Continual Multitask Learning**

Jan 2024 – Oct 2024

*Collaborators: Meiyi Ma*

- Developed a Continual Multitask Learning framework, addressing challenges in continual multitask learning without requiring replay buffers

**Towards Verified and Targeted Explanations through Formal Methods**

Sep 2023 – May 2024

*Collaborators: Meiyi Ma, Taylor Johnson, Diego Manzananas Lopez*

- Led development of framework to evaluate comprehensiveness of attribution methods
- Utilized Neural Network Verification (NNV) to analyze boundaries of sampling-based attribution methods
- Designed experiments showcasing method's robustness in providing deterministic explainability

**EXACT: A Meta-Learning Framework for Precise Exercise Segmentation in Physical Therapy**

May 2023 – Jun 2024

*Collaborators: Meiyi Ma*

- Led development of EXACT, a novel method for segmenting exercises within multivariate time series data using PyTorch
- Designed U-Net architecture with temporal positional encoding for exercise phase identification
- Conducted extensive experiments demonstrating superiority over traditional segmentation techniques
- Developed modular Python framework for easy replication and experimentation

**MicroXercise: A Micro-Level Comparative and Explainable System for Remote Physical Therapy**

Aug 2022 – May 2023

*Collaborators: Meiyi Ma, Pamela Wisniewski*

- Led development of MicroXercise integrating Siamese Neural Networks with saliency maps
- Designed Siamese Neural Network for similarity determination and attribution scoring

- Incorporated saliency map techniques for explainability across modalities
- Conducted mixed-methods study with interviews, surveys, and quantitative analysis

### **PhysiQ: Off-Site Quality Assessment of Exercises in Physical Therapy**

Aug 2021 – May 2022

*Collaborators: Meiyi Ma*

- Led development of PhysiQ framework for continuous tracking of off-site exercise activity
- Designed multi-task spatiotemporal Siamese Neural Network for quality assessment
- Collected and annotated data for 31 participants with varying exercise quality levels
- Achieved 89.67% detection accuracy and 0.949 R-squared correlation in similarity comparison

## **Leadership and Service**

### **Mentor, Students Projects**

Nashville, TN

Aug 2021 – Present

*Vanderbilt University*

- 2025–Present: Mentoring undergraduate Daniel Park on extension work for ICCPS 2025.
- 2025–Present: Mentoring undergraduate Selena Xu on GENIUS project for explainable and responsible AI.
- 2024–2025: Mentored master's student Yilin Liu and undergraduates Haowei Fu and Christin Ann Sanchez on "SmartSeg: A Non-Parametric Approach for Wearable Camera Video Temporal Segmentation," an event segmentation project for a nursing training simulation.
- 2024–2025: Mentored undergraduate Haoran (Max) Ma on an IMU-guided video classification project to improve model accuracy.
- 2024–2025: Mentored undergraduate Siwoo Bae on "Learning with Preserving for Continual Multitask Learning," focused on preserving representational space in continual learning. The work was presented at the Vanderbilt Undergraduate Research Fair, earning a poster award.
- 2022–2024: Mentored undergraduate Xutong (Helen) Sun and Yashvitha Thatigotla on "EXACT: A Meta-Learning Framework for Precise Exercise Segmentation in Physical Therapy."
- 2022–2023: Mentored undergraduates Anna Chen on projects in iOS app development, Unity visualization, and data analysis for micro-level exercise explainability, notably "MicroXercise: A Micro-Level Comparative and Explainable System for Remote Physical Therapy."
- 2021–2022: Mentored undergraduates David Atwood and Melissa Wang on "PhysiQ: Off-Site Quality Assessment of Exercise in Physical Therapy."

### **Volunteer, Mission Autonomy**

Nashville, TN

Oct 2025 – Oct 2025

#### **Hackathon**

*Vanderbilt University & AWS*

- Assisted with student organization and coordination for the Mission Autonomy Hackathon.
- Helped manage logistics and location setup for the hackathon event.
- Supported participants and organizers throughout the event.

### **Volunteer, PhD Orientation Talk**

Nashville, TN

Aug 2025 – Aug 2025

*Vanderbilt University*

- Delivered a talk sharing personal PhD experience and insights with incoming graduate students.
- Provided guidance and advice to new students about navigating the PhD journey.
- Answered questions about research, coursework, and academic life at Vanderbilt.

### **Volunteer, NSF CPS PI Meeting**

Nashville, TN

Mar 2025 – Mar 2025

*Vanderbilt University*

- Volunteered approximately 4-6 hours during the Principal Investigators meeting.
- Assisted with the setup for the poster and demonstration sessions.
- Provided guidance to presenters and attendees during these sessions.
- Helped with troubleshooting technical issues during the poster and demo sessions.

### **Graduate Honor Council Panelist**

Nashville, TN

Feb 2024 – Feb 2025

*Vanderbilt University*

- Acted as a panelist to understand and justify the accused student and his/her innocence towards Vanderbilt School Honor Codes.
- Reviewed the materials of the accused, student and accusers, instructors to capture the full story of the situation and discussed the potential violation of the honor code at graduate school level.

### **Volunteer, IEEE/ACM CHASE**

Wilmington, DE

Jun 2024 – Jun 2024

*IEEE/ACM*

- Worked around 10 hours in total for the period of 3 days at the conference; helped at the registration desk to guide conference participants and to distribute conference materials.
- Communicated and introduced the general guideline and schedules; organized the poster sessions for clarification of locations, materials gathering, and assistance of troubleshooting.

### **Volunteer, Graduate Student**

Nashville, TN

Mar 2024 – Mar 2024

#### **Recruitment Day**

*Vanderbilt University*

- Toured the new student body to different departments and building on campus at Vanderbilt University.
- Communicated and introduced the research works at Institute for Software Integrated Systems at Vanderbilt University.
- Discussed the experiences and future directions with faculties and new recruits.

**Volunteer, SmartComp 2023**

**Nashville, TN**

**Jun 2023 – Jun 2023**

*IEEE*

- Provided volunteer support during the SmartComp 2023 conference for four days.
- Organized posters, provided guidance to presenters, and assisted with running errands.
- Assisted in organizing presentations and panels, ensuring smooth transitions and timely schedules.
- Collaborated with the conference team to create a positive and engaging environment for attendees.
- Contributed to the overall success of the conference by fulfilling various volunteer responsibilities.

## **Awards**

---

- **AAAI 2026 NSF Student Travel Award:** Received NSF Student Travel Award to attend and present at the AAAI 2026 conference.
- **2025 NSF CPS Rising Stars:** Selected to participate (17% acceptance rate) for the NSF Cyber-Physical Systems Rising Stars Workshop at Vanderbilt University, recognizing research excellence and academic leadership potential.
- **IEEE/ACM CHASE 2024 NSF Travel Award (Grant):** Honored for research excellence and presentation in Wilmington, Delaware. Received the NSF Travel Award, acknowledging the high esteem of the accepted paper.
- **Vanderbilt Awards for Doctoral Discovery (VADD):** Awarded for research excellence and presentation in Wilmington, Delaware, at Vanderbilt University.
- **ICCPs 2024 NSF Travel Grant:** Recognized for research excellence to travel to Hong Kong to further develop research skill in the domain of Cyber-Physical System.
- **UbiComp/ISWC 2023 Travel Grant:** Recognized for the research work and presented at Cancun, Mexico for accepted paper.
- **Vanderbilt University Travel Grant:** Recognized for the research work in the intersection of physical therapy and AI, traveling to present the work in 2023.
- **Magna Cum Laude:** Recognized for academic excellence by Donald Bren School of Information and Computer Science at UC Irvine.
- **Specialization in Intelligent Systems:** Achieved specialization through dedicated coursework and projects at UC Irvine.
- **Dean's Honor List:** Consistently maintained high GPA to be recognized on the Dean's List at UC Irvine.

## **Skills**

---

**Programming:** Python, Java, C/C++, JavaScript, TypeScript, Swift

**Frameworks:** PyTorch, TensorFlow, Angular, Node.js, React

**Tools:** Git, Docker, LaTeX, Unity

**Domains:** Machine Learning, Deep Learning, Computer Vision, Healthcare AI, Explainable AI
